This Fix works on all of your Games. Part 1 of 3 Guide to fixing games that wont launch, why do they happen, and how to fix them. … This guide will cover how to fix the myriad of errors or issues you might experience with your game files or games that wont launch, including corrupt installers, and much more. A: Step 3 - You need to clear the installation folder of your game. In our instructions we actually cleared the steam app and then deleted the folder. In your Steam Documents folder simply delete all of the contents. Step 4 - You need to change some of your installed games. In one of the crashes where this fix is shown in the link the author had to remove an application that was on the process list and the cause of the crash. It seems like an installer does something very sensitive and if you know how to change your Installer you can fix this issue. Q: Not getting Maven 2 to download dependencies from remote repository I am trying to learn how to build a web project from the command line. I have managed to set up Maven so that I can run mvn clean install this builds a war file and deploys it onto an apache tomcat server. What I cannot figure out, is how to use Maven to download the dependencies that the build requires. I would like to use the remote repository 'Stash' which is so easy to setup in Eclipse. I found some examples here, but without any success: Example of using Maven Repository I have a folder setup in my 'C:\Stash' folder that stores all of the Maven dependencies. I can download the dependencies from this folder, I would like to see Maven download from
